Projects

Doctors' Appointment Management System

<https://doctors-and-patients-appointment-system.vercel.app/>

Development of a doctor appointment management system.

- The Doctors and Patients Appointment System is a full stack web application that allows users to book appointments with specialist doctors. It features a user-friendly interface where patients can find doctors based on specialization, view doctor details, and schedule appointments. It also provides an option for doctors to apply and list their services.
- This project is built using Next.js, MongoDB and deployed on Vercel.

Academia Connect - School Management System

<https://school-management-system-frontend-mern.vercel.app/>

Development of a school management system.

- The School Management System is a MERN stack application designed to manage various school operations efficiently. It features user roles for admins, teachers, and students. The system allows for managing student records, attendance, and academic performance. Admins can manage users, classes, and other school activities.
- This project is built using MongoDB, Express, React, and Node.js and is deployed on Vercel (frontend) and Render (backend).

Recipe Web Application

<https://recipe-web-seven.vercel.app/>

Development of a Recipe web Application.

- The Recipe Web Application is a user-friendly platform for exploring and discovering various recipes. It allows users to search for recipes by name or ingredients, view detailed instructions, and explore meal categories. The clean and responsive design ensures a seamless browsing experience.
- This project is built using React, Dummy JSON Api for Data and deployed on Vercel.

Quick Mart E-Commerce Web Application

<https://e-commerce-web-tan.vercel.app/>

Development of a Quick Mart E-Commerce Web Application.

- The Quick Mart E-Commerce Web Application is a shopping platform where users can browse and purchase products, view detailed descriptions, and add items to the cart. It features a clean, responsive design for a smooth shopping experience.
- This project is built using React, Firebase for Authentication, Dummy JSON Api for Data and deployed on Vercel.

Weather App

<https://haseebraza2004.github.io/Weather-App/>

Development of a Weather App.

- The Weather App allows users to search for current weather conditions by city. It features a simple and clean interface for displaying temperature, weather status, and other relevant details.
- The project is built using JavaScript, HTML, and CSS and is deployed on GitHub Pages.

Calculator

<https://haseebraza2004.github.io/Calculator/>

Development of a Calculator web.

- The Calculator App is a simple, functional calculator. It supports basic arithmetic operations, including addition, subtraction, multiplication, and division, with a clean and responsive user interface.
- the project is built using JavaScript, HTML, and CSS and deployed on GitHub Pages.
